# Align Release 1

## ERO Process Improvements Report

October 15, 2020

**RELIABILITY | ACCOUNTABILITY**

- Process harmonization efforts for the following business process areas
  - Cycle 1-Self Reports, Self Logging
  - Cycle 2-Enforcement
  - Cycle 3-Mitigation

Process Area	Current State	Future State
<b>Submittal forms</b>	<ul style="list-style-type: none"> <li>Self-Report and Self-Log forms are similar, but some inconsistencies exist in number/type of fields and language</li> </ul>	<ul style="list-style-type: none"> <li>Single, standardized form and embedded guidance for both Self-Reports and Self-Logs to drive a consistent registered entity experience</li> </ul>
<b>RFIs</b>	<ul style="list-style-type: none"> <li>RFIs are sent manually, outside of current systems</li> <li>Burdensome and creates inconsistency in user experience</li> </ul>	<ul style="list-style-type: none"> <li>RFIs can be triggered ad-hoc within the tool; all information is tied to the correct record</li> <li>Records can be passed back and forth via workflow to engage entities consistently when requesting additional information</li> </ul>
<b>Self-Logging</b>	<ul style="list-style-type: none"> <li>Eligible entities submit spreadsheets on a quarterly basis; regions manually enter into current systems</li> <li>Some entities are choosing to submit entries as self-reports to avoid using a manual spreadsheet</li> <li>Inconsistency in how Self-Logging program is implemented – all standards eligible vs. select standards</li> </ul>	<ul style="list-style-type: none"> <li>Eliminate use of spreadsheets; Self-Log items submitted on-demand by entities</li> <li>Will not restrict Self-logging eligibility to specific standards</li> </ul>
<b>Preliminary Screen</b>	<ul style="list-style-type: none"> <li>Primarily a manual process to address the RoP questions (e.g., Is standard effective? Is it a duplicate entry?)</li> </ul>	<ul style="list-style-type: none"> <li>Reduction in effort required based on system-driven validations (e.g., Self-Reports can only be submitted for effective standards; duplicate entries will be rejected and/or flagged)</li> <li>Reduces number of times regions need to follow-up with entities</li> </ul>
<b>Record management</b>	<ul style="list-style-type: none"> <li>System limitations result in multiple record IDs (region and NERC) and creates confusion</li> <li>Inconsistencies in how related PNC/violation records are linked/managed</li> <li>Limited-to-no data visibility across regions</li> </ul>	<ul style="list-style-type: none"> <li>Single, consistent record IDs across ERO Enterprise</li> <li>Improved record linkage (e.g., related PNCs/violations) and visibility across regions (e.g., MRREs)</li> </ul>

Topic	Current State	Future State
<b>Tracking</b>	<ul style="list-style-type: none"> <li>Tracking of non-monetary sanctions and other activities agreed to during settlement (e.g., above and beyond activities) is limited</li> </ul>	<ul style="list-style-type: none"> <li>Introduction of an "obligations" section of the record to capture and track settlement activities similar to mitigating activities</li> </ul>
<b>Oversight</b>	<ul style="list-style-type: none"> <li>NERC often requests supporting evidence as part of oversight which creates significant manual burden on the regions to gather and submit</li> </ul>	<ul style="list-style-type: none"> <li>Incorporating evidence into enforcement records and improving transparency within the system will largely eliminate the burden of this activity</li> </ul>
<b>Forms</b>	<ul style="list-style-type: none"> <li>Inconsistencies in the risk assessment and violation forms among regions</li> </ul>	<ul style="list-style-type: none"> <li>Standardized forms to enable consistent output and reporting</li> </ul>
<b>Dismissals</b>	<ul style="list-style-type: none"> <li>Inconsistent classification of dismissals (i.e., why something was dismissed)</li> </ul>	<ul style="list-style-type: none"> <li>Standardized set of dismissal categories, enabling improved analytics, trending and metrics monitoring</li> </ul>
<b>Violation Processing</b>	<ul style="list-style-type: none"> <li>Locating and tracking case notes from prior violations in support of processing a violation is time-consuming due to disparate storage locations</li> </ul>	<ul style="list-style-type: none"> <li>Ability to link/reference relevant violation records as part of processing a current violation will result in meaningful efficiency gains for the regions</li> </ul>
<b>Record Management</b>	<ul style="list-style-type: none"> <li>CE and FFT records are closed manually when the appropriate conditions are met (i.e., 60-day review period and mitigation are both complete)</li> </ul>	<ul style="list-style-type: none"> <li>Opportunity to automate this process; to be explored further in design</li> </ul>

Topic	Current State	Future State
<b>Use of Mitigation Plans vs. mitigating activities</b>	<ul style="list-style-type: none"> <li>Mitigating activities have limited-to-no tracking capabilities in current tools</li> <li>Results in Mitigation Plans being used more often than necessary (e.g., for minimal risk compliance exceptions), creating unnecessary work and complexity</li> </ul>	<ul style="list-style-type: none"> <li>Both Mitigation Plan and mitigating activities will have similar tracking capabilities</li> <li>All mitigation will begin as mitigating activities by default, with the ability to escalate to a formal Mitigation Plan when necessary</li> <li>Updated guidance to reflect the changes in approach</li> </ul>
<b>Reporting</b>	<ul style="list-style-type: none"> <li>Reporting and oversight for mitigation is largely manual and burdensome</li> </ul>	<ul style="list-style-type: none"> <li>Enhanced tracking and reporting capabilities will result in meaningful efficiency gains</li> </ul>
<b>Revisions</b>	<ul style="list-style-type: none"> <li>Ability to iterate and revise Mitigation Plans and mitigating activities is challenging in current tools</li> </ul>	<ul style="list-style-type: none"> <li>Improved capabilities for entities to request revisions and for Regions to manage them</li> </ul>
<b>Forms</b>	<ul style="list-style-type: none"> <li>Inconsistencies in current mitigation forms among regions</li> </ul>	<ul style="list-style-type: none"> <li>Standardized form to capture mitigating activities and Mitigation Plans</li> </ul>
<b>Verification of completion</b>	<ul style="list-style-type: none"> <li>Several Regions are verifying completion of all mitigation plans, resulting in heavy workload</li> </ul>	<ul style="list-style-type: none"> <li>Regions can verify completion of minimal risk CE and FFT mitigation on a sample basis</li> <li>Future opportunity to apply a similar sample approach to moderate and severe instances</li> </ul>

# Questions and Answers
